SHADIN AVIONICS UPGRADES **HEADQUARTERS/MANUFACTURING FACILITY**

St. Louis Park, MN – July 17, 2007 –In a proactive move to better serve their clients and dealers and mark a significant milestone in its planned growth strategy, Shadin Avionics recently completed renovations on its 22,000 square foot headquarters/manufacturing facility in St. Louis Park, MN.

Designed specifically for efficient communication among key departments, this new layout will allow future growth and is exclusively designed to handle the workflow for Shadin processes. By restructuring the facility it has made the space more open and inviting. Employee workspaces were designed with comfort and convenience in mind, and the newer technology has made processes more efficient by reducing workload.

With the floor plan designed especially to promote efficiency, Shadin employees now look forward to improved communications between departments and the tools to handle workloads more effectively. The renovation included reworking and refurbishing the Engineering, Research & Development, and Accounting departments. The document control area and research and development teams were relocated near the engineering offices. The technical support, personnel, and the repair team were positioned nearby. Also included in the renovation were the executive offices and reception area.

“Now when people walk into our facility, they can feel and sense we are a company that has gone through change,” said Robert Randall, Executive Director of Sales and Marketing, Shadin Avionics. “We structured the facility so we would have a smooth transition from the design concept to the design development, all the way to the point where the product gets sent to our production department.”

FOR IMMEDIATE RELEASE

Renovation is important for a company that is in the process of re-imaging. During the past two years, Shadin has changed dramatically. Management has redefined virtually every aspect of the company.

“We want our employees and clients to see that the change is not only processes and procedures, but a completely different business outlook as well.” said Randall. “With the recent re-imaging campaign developed under Shadin’s new management team, we really feel this step was necessary in continuing to improve efficiency and service for our clients and dealers.”

Since 1978, Shadin Avionics has specialized in the design, manufacture, support and distribution of Fuel Flow Systems, Engine Trend Monitoring (ETM), Altitude Management Systems, Air Data Computers (ADC), Converters and other instrumentation for turbine, piston and rotor aircraft for the military, general and corporate aviation markets.
